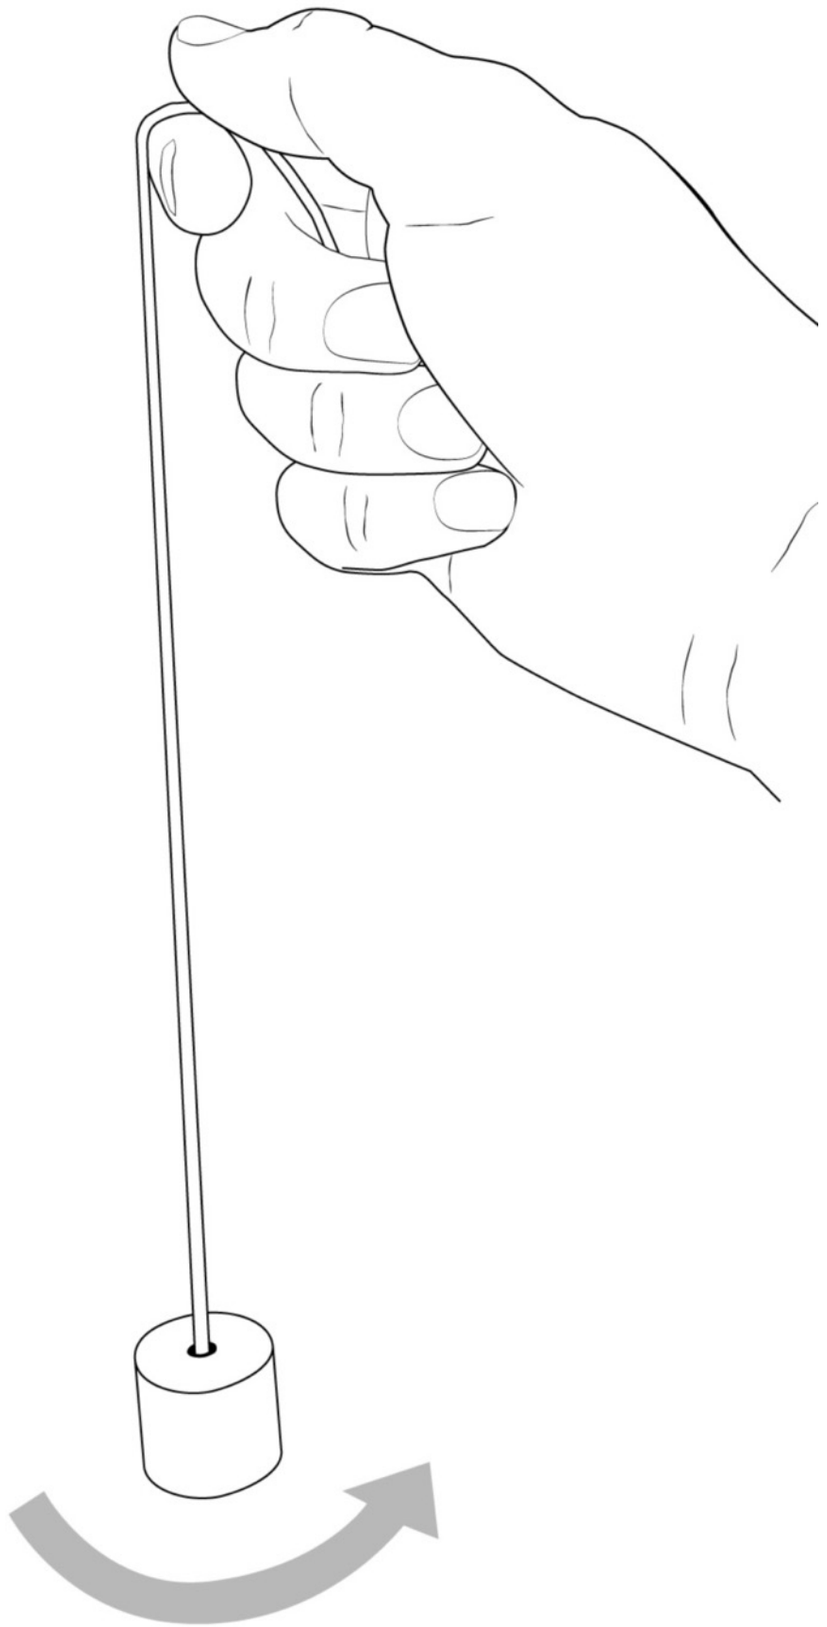
Stuart Nolan…
technology for magic
+ ideomotor response



So what is resonance?

“The condition in which an oscillating or periodic force acting on an object or system has a frequency close to that of a natural vibration of the object; a resulting amplification of the natural vibration.”

“Corresponding or sympathetic response; an instance of this. In later use also: the power or quality of evoking or suggesting images, memories, and emotions; an allusion, connotation, or overtone.
